ACADEMIC QUALIFICATIONS

Year	Qualification	Institute
2025	B.Tech	The LNM Institute of Information Technology
2021	Class XII (CBSE)	St. Aloysius Senior Secondary School
2019	Class X (CBSE)	St. Aloysius Senior Secondary School

WORK EXPERIENCE

Software Engineer - 1 | *Deloitte Touche Tohmatsu India LLP* (July'25 - Present)

- Designed and developed scalable modules for **bulk upload management**, **dynamic listing pages** and **add/edit workflows**, improving operational efficiency by **85%**.
- Implemented TanStack Query for server state management, enabling caching, query invalidation, and background synchronization
- Architected and developed **DEC React** component library, defining reusable UI patterns and accelerating feature delivery by **3x**
- Implemented **Role-Based Access Control (RBAC)** system for secure, role-driven UI rendering and controlled feature access
- Built robust **bulk data processing workflows** with validation, error handling, and real-time progress tracking mechanisms
- Engineered high-performance **data-intensive interfaces** with advanced pagination, filtering, and sorting for large datasets
- Contributed to backend development by implementing **API endpoints** and handling server-side logic for core application features
- Integrated frontend with backend systems via RESTful APIs and handled secure, token-based authentication using **Azure AD**
- Implemented unit testing using Vitest achieving **95% code coverage** significantly improving application reliability and stability

Software Engineer Intern | *Deloitte Touche Tohmatsu India LLP* (Jan'25 - June'25)

- Developed scalable UI workflows for **email notification management**, enabling dynamic template rendering and customization
- Engineered reusable **table-based listing interfaces**, improving data visibility, consistency, and maintainability across modules
- Integrated frontend components with backend systems via **RESTful APIs**, ensuring consistent and reliable data rendering
- Contributed to the scalability, reliability, and maintainability of the web application, ensuring it meets future system demands
- Worked with **PostgreSQL** for efficient data querying and schema design, ensuring data consistency and optimized performance
- Developed **proof-of-concepts (POCs)** and contributed to technical documentation to streamline integration of new features
- Collaborated with the team to document data models and services, ensuring clear understanding of the application's structure

PROJECTS

EduSync - Appointment Scheduling System

- Built concurrency-safe slot booking system using atomic operations to prevent double bookings and maintain data consistency.
- Developed a scalable backend using MVC architecture, optimizing MongoDB queries for efficient data storage and retrieval.
- Designed **real-time slot availability handling**, ensuring consistent booking states across concurrent users.
- Designed and integrated RESTful APIs for booking workflows, enabling seamless communication between frontend and backend.
- Optimized application performance by handling concurrent requests and minimizing latency in booking operations.
- Ensured data integrity and reliability through structured validation and controlled state transitions during booking flows.

Smart Interview Simulator (LLM-Based)

- Developed a scalable **frontend interface** for AI-powered interview simulations to handle real-time user interactions efficiently
- Implemented robust integration with **LLM-based APIs** to generate context-aware questions and dynamic responses consistently
- Integrated **JWT-based authentication** to secure user sessions and enable protected interview workflows across the application
- Developed lightweight **backend APIs** to manage interview sessions, user data, and persistent response storage efficiently
- Built reusable **component architecture** to support extensible interview flows and improve frontend maintainability

Weather Whiz, Web Application

- Developed a fully **responsive application** that delivers current weather conditions and detailed forecasts for the selected city
- Integrated async data fetching from a weather API to provide **real-time** updates on temperature, humidity, and wind conditions
- Designed a user-friendly interface using **react-accessible-accordion** for effortless navigation of the daily weather forecasts
- Enhanced the UI with **async-paginate**, thoughtfully incorporating weather icons, detailed descriptions, and temperature ranges

TECHNICAL SKILLS

- Languages:** JavaScript, TypeScript
- Libraries & Frameworks:** React, TanStack Query, Redux, Yup
- Web Engineering:** HTML5, CSS3, Component Architecture, RBAC, State Management
- Tools & Platforms:** Git, Azure DevOps, REST APIs, Postman

EXTRA CURRICULAR ACTIVITIES

Training and Placement Cell

- Served as a senior executive of the **Training and Placement Cell, LNMIIT**, contributing to placement operations
- Managed a team of **48 members** and coordinated end-to-end placement drives, efficiently handling **600+ students**

Leadership and Event Management

- Led event management as **Event Head** for “Who Dun IT” at **PLINTH 2023**, coordinating operations across a 2-day event
- Managed participation of **60+ teams** and ensured smooth execution across multiple activity stages within an 8-hour schedule
